

Reflect/review

Reflect on the process/interest that is extending and how you can further extend it. This will be done through our weekly reflections in the program.

Observation

A specific observation on an individual child/small group – what happened in the experience?

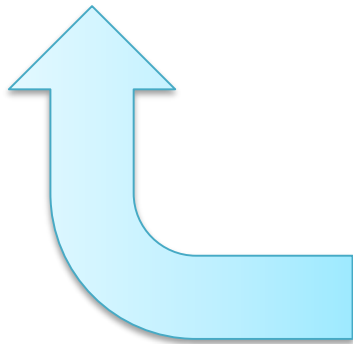

Treetops Planning Cycle

Implement

Monitor what happens when you extend the experience. Document what happens and plan further experiences from this. Usually interest/project based experiences get to this stage. Not all observations need to go here.

Analyse/Reflect

Analyse why the observation was important to that particular child. Use EYLF language in your reflection instead of the whole outcome.

Design

Put a follow up activity into the program, how are you going to extend the observation/experience further for that child/group of children?
